

# HR Analytics Dashboard (Excel)

## About Dataset

The dataset from Kaggle contains employee information such as:

- Employee demographics
- Department
- Job Role
- Education
- Age
- Gender
- Marital Status
- Salary
- Attrition
- Job Satisfaction
- Years at Company

Before creating the dashboard, I first explored the dataset to understand its structure, identify the available variables, and determine the key insights that could be extracted. After becoming familiar with the dataset, I completed the following stages of the project.

## **1. Data Preparation**

- Removing duplicate records
- Removing unnecessary columns
- Creating Age Groups for easier analysis
- Checking for missing or inconsistent values
- Preparing the data for Pivot Tables

## **2. Pivot Tables**

After the data preparation and the data becomes ready, I created five Pivot Tables to summarize HR data, including:

- Employee distribution by Department
- Attrition by Department
- Employees by Age Group
- Average Scores by Department
- Employee Hiring Trends

## **3. Charts**

Then, I add 4 Pivot Charts for each Pivot Table for the dashboard.

- Employee Distribution
- Hiring Trends
- Age Group Breakdown
- Average Scores by Department

## **4. Extra Dashboard Features**

The dashboard also includes:

### **KPI Cards**

- Total Employees
- Average Engagement
- Average Work-Life Balance
- Average Satisfaction

### **Interactive Filters**

Slicers allow users to filter the dashboard by:

- Department
- Year

## **Skills Demonstrated in this Project**

- Microsoft Excel
- Data Cleaning
- Data Transformation
- Pivot Tables
- Pivot Charts
- Dashboard Design
- KPI Reporting
- Interactive Slicers
- Data Visualization
